

INSULATION - WALKABILITY

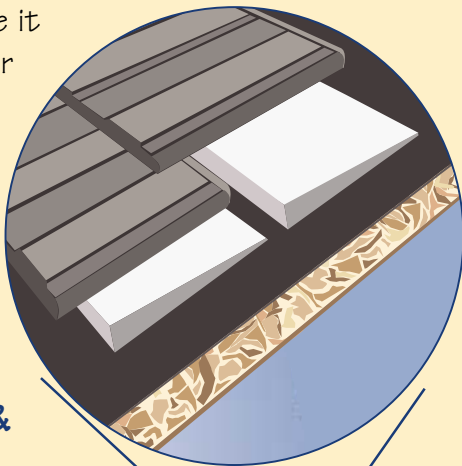

With Wedge-It installed, you add comfort and value.

WEDGE-IT PROVIDES ADDED INSULATION AND SOUND PROOFING

WEDGE-IT was invented by a roofer. The creation was inspired by the concern of homeowners asking the question...**"Can we walk on our roof after it is installed?"** WEDGE-IT, properly installed under tile roofs can more than double the load bearing capacity of that roof.

In addition, **WEDGE-IT** provides a substantial amount of added insulation and sound proofing.

WEDGE-IT is easy to install. Just place it over the tar paper and the properly fastened tiles will secure it.

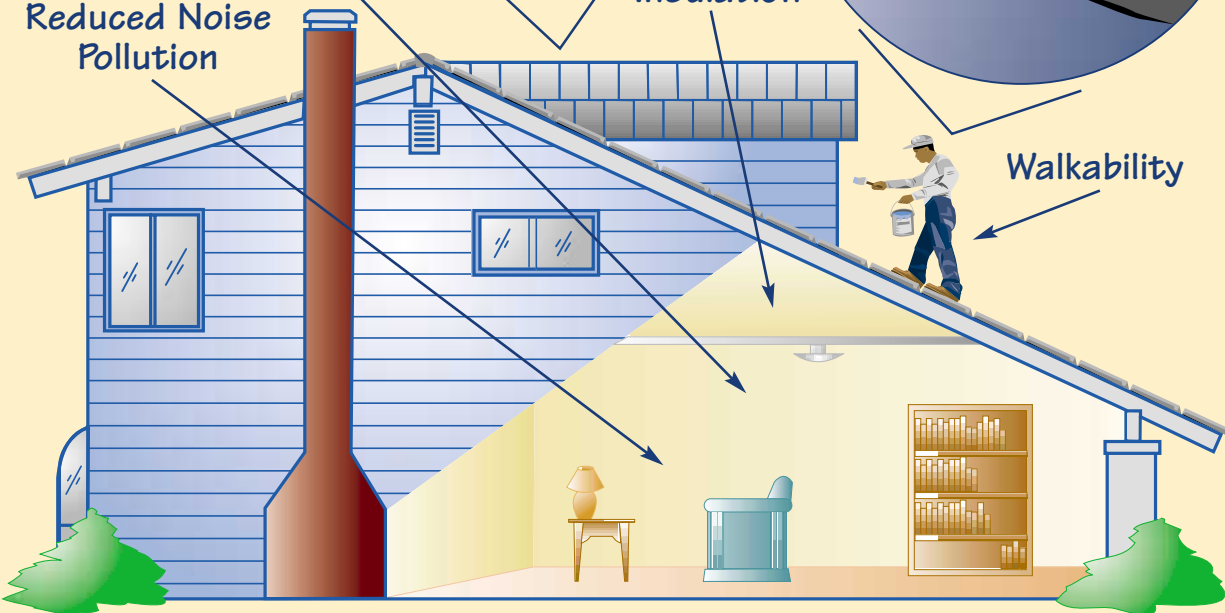

Lower Heating & Cooling Costs

Reduced Noise Pollution

Added Insulation

Walkability

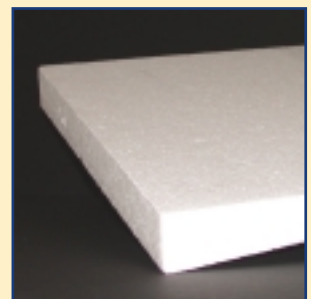

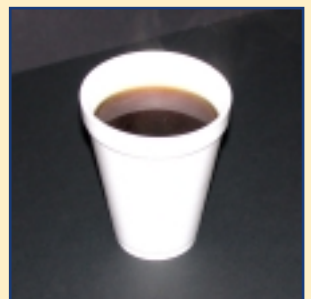

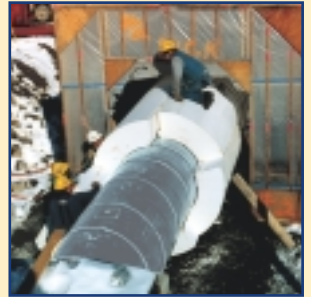

WEDGE-IT MORE THAN DOUBLES THE LOAD BEARING CAPACITY

EPS foam can withstand heavy loads and extreme conditions. The Alaskan Pipeline was insulated and stabilized with EPS.

More than 3.6 million board ft. of Insulfoam EPS is incorporated in the roof, walls, fire proofing, special shapes, and figures for the Las Vegas MGM Grand Hotel.

EPS Foam is so durable it is being used here to stabilize bridge and road construction.

WHAT OUR CUSTOMERS ARE SAYING

"We just installed new roofs with Wedge-It on 229 homes in our Home Owners Association. We took samples of the roofing with the Wedge-It supports underneath and stomped across it to prove it would hold up. The Wedge-It came out best. The good insulating qualities means we will no doubt get savings on our heating and air-conditioning costs over the years. We observed that the Wedge-It product was very easy to install. We feel we made the best choice and are very pleased."

– James M.
Board Member and Homeowner for HOA Fullerton, CA

"I've been painting for 20 years, I walk on a lot of roofs. This is the best thing to happen to tile roofs. A homeowner would be a fool not to install Wedge-It. The first time they paint will pay for it. I just re-roofed my own home and Wedge-It is up there."

– Steve M.
Painter, Orange County, CA

"Many of my customers want a tile roof & are worried about tile breakage. They are relieved to know about Wedge-It, it makes perfect sense to them. EPS foam has primarily two purposes, TO INSULATE & REDUCE BREAKAGE. It doesn't take much for a homeowner to understand that. It is a shame to not let your customer know about this innovative product."

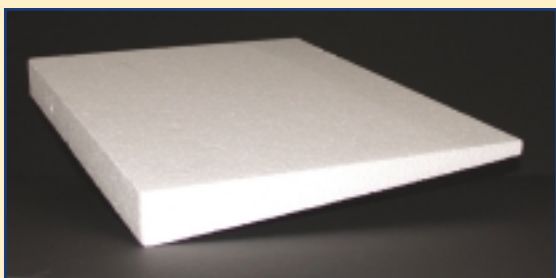

– Scott S.
Salesman, Orange County, CA

"I installed the Wedge-It under my new roof. It has improved the interior comfort. Other people on the block are jealously waiting."

– Carl D.
Homeowner, 86 Home Project, Irvine, CA

"Wedge-It was specified on a church in Springville UT. It was easy and quick to install. We'll be using more."

– Steve Davis
Salesman, Pleasant Grove UT

Manufactured By:
Premier Industries Insulfoam
Largest EPS Block Molder in the Nation
35 Years in Business

Complies To Uniform Building Code

Classified UL Rated

Thoroughly Tested:

Safe, Non Corrosive, Non-Toxic
Environmentally Responsible, Contains no CFC
HCFC or Formaldehyde

EPS Code Compliance:

Meets HUD Specification , ASTM C578
ICBO 3414
Foamed Plastic 84Z2

Surface Burning Characteristic

Flame Spread 20#
Smoke Developed 150-300#

R-Values Type I 1# Approx. 4.35 per inch

WEDGE-IT
Insulation & Roof Tile Support Patent Pending
